

Condition 79	Pile Driving Requirements
	<p>The construction contractor shall notify all property owners and tenants adjacent to the proposed pile driving activities of the days and hours of operation. The construction contractor shall also require that a noise damper be utilized between the pile driver and the object that is being driven into the ground.</p>
	<p>Evidence of compliance:</p> <p>The LOWRF plans and specifications do not call for Pile-Driving in the classic sense (driving steel, concrete, or wooden piles into the ground). However, there are provisions in the project specifications (Contract Documents) allowing the contractor to use some shoring methods such as cantilevered sheet piling, internally braced sheet piling, slurry walls, soldier piles and lagging, and other similar shoring systems. If there are pile driving activities proposed by the contractor, the contractor will notify adjacent property owners as to the hours and days of operation.</p>

Condition Satisfied
